chatgpt

25 October 2026 09:32

Professionaly → save time
improve producting
analyze data,
Create content
Solve problems
make decisions.

Uses:

1. Email & business Communication
   - Draft professional emails to manager, HR, clients.
   - meeting Summaries
   - Check grammer & make communcation better.

2. Data science & analytics
   → generate python, ML code.
   → generate clean datasets & perform analysis.
   → Explain you the complex ML code.
   → debug errors

→ debug errors
→ create charts / business dashboards.

③ Software engineer / business leader.

→ Summarize lengthy documents.
→ Prepare presentation -
→ understand complex code.
→ Compare business strategies.
→ Complex info & convert into summary which easily understandable.

④ HR Professionals

→ Recruitment & drafting job descriptions.
→ create role-specific interview questions.
→ employee onboarding.
(Prepare welcome emails, develop first week schedule, draft employee handbook).
→ Performance management.
→ Prepare appraisal discussion guides, performance review templates.
→ draft
→ learning & development → design

→ Learning & development → design training & programs.

→ employee engagement

Prompting formula — to improve (quality of response) → when we provide right context.

"Draw a lady sitting near a board"

→ wires & financ

simple formula:

① Role → who should the gpt act as?

Data Scientist?

HR?

② Task → what should be done by gpt?

Analyse customer churn?

generate a report of meeting?

generate a report of meeting?
Summarise the document?

(3) Context → background info.
Ex. audience → manager / client

(4) Output format → How answer should look like?
Python code / chart / recommendation / ppt.

Risks which are often noticed while generating response using gpt / other tools

(1) Bias in AI
→ AI bias

Company → AI to screen resumes

Training data → AI might unfairly rank male ↑ female ↓

data

rank male ↑
female ↓

How to reduce bias

→ use diverse datasets

→ use balanced dataset.

prompt

"Review the recruitment process for potential gender, age & other kinds of bias. Identify assumptions & recommend fair, job-related evaluation criteria"

② Hallucination

AI generates info that sounds convincing but it's inaccurate/false.

Ex:- Get the info of stock price for today.

why? → GPTs/other AI tools are trained on past data.

Solution → Including RAG.

→ Verify facts using reliable sources.

→ Provide relevant data, ask AI to analyze.

(3) Privacy

Privacy concern arises when personal data/confidential data is entered into an AI tool.

ex. HR → uploads an excel sheet

Employee info.
- name
- salary
- phone.
- performance review.

to generate report

How can we as professionals protect privacy of documents?

→ Follow company's AI & data protection policies.

→ Remove or anonymize personal

→ Remove or anonymize personal identifiers where possible.
→ Use approved enterprise tools & appropriate access controls.
→ Never past passwords / API Keys / Confidential info into any unapproved service.

④ Copyright

Concern relate to legal rights associated with text / images / music / videos / software / training materials.

Ex:- Trainer → asks AI to reproduce an entire paid textbook chapter

Copyright issue.

To deal with copyright risks
→ use licensed, public-domain resources.
→ Avoid using AI to reproduce

→ Avoid using AI to reproduce copyrighted work.
→ Check applicable laws & policies before any commercial use.

Bias
Hallucination
Privacy
Copyright.

→ verify output of AI / protect sensitive data / retain human accountability

Human in Loop in AI

↳ involving a human in AI system to review, verify, correct or approve its output before any action taken.

AI do the work. → human check it before

wanc.

Check it before final decision.

Result — approved
reject.

Use case :-

① HR recruitment

AI
drafts
interview
analysis / summarize
qualification.

⇒

Recruiter
Check the info. & make the hiring decision using fair / consistent criteria.

② Healthcare

AI
analyze medical image / summarize patient info.

Clinician / Doctor
evaluate the evidence & make decision.

③ Email drafting

AI
gpt draft an email to employee.

→

HR
Check the tone, name date.

email to employee. → names, dates, the policy details.

When we have Human in loop.

→ Reduce errors ⇒ Human can catch

→ control bias ⇒

→ Protect privacy.

→ Maintain accountability.

100 responses → manually?

Design the AI workflows → human review happens at right points before AI generated data which can be generated by considering by privacy/bias ...

chatgpt, perplexity, CanvaAI...

Which tool to select when?

* Chatgpt → best used for writing, explaining technical concepts, Coding assistance & developing work plans.

* NotebookLM → best for studying/ Summarising documents / Comparing sources.

* Perplexity — best for web research, discovering sources & explaining different topics.

* Canva → best for designing presentations, Social media contents & infographics.

* n8n → to build automated workflows, connecting apps.

* Check if the tool is best fit for your task?

* cost & privacy.

& privacy.

X Usability

+ AI tool (Why?) ✓ → used to solve any kind of workplace problem & improve efficiency.

- Email assistant ✓
- Data analysis assistant ✓
- Content generate. ✓
- Workflow automation ✓

AI tools → means 2 things while using AI tools.

→ Time saved → how much faster is the task completed using AI.

→ Quality check.

→ Output generated → accurate/complete/relevant/safe to use.

How to check/calculate the time saved?

HR → prepared employee training had

HR → prepared employee training materials

Without AI	With AI
60 min	25 min.

Time saved = Original Time (without AI) − AI assisted Time.

= 60 − 25

= 35 min

Time Reduction (%) = $\frac{\text{Time saved}}{\text{original Time}} \times 100$

= $\frac{35}{60} \times 100$

= 58 %

Quality check

→ Accuracy → facts / calculations / names / dates is accurate

→ Accuracy → facts / calculations / numbers / data is accurate

→ Completeness → in the response if all the required facts are included.

→ Relevance → if the output generated is wrt the question asked.

→ clarity → is the language professional & understandable.

→ bias & fairness → to check if the output is unfair to anyone.

→ privacy & copyright.

Generate Quality Score

1 → Poor

2 → Needs Info

3 → acceptable

4 → Good

5 → Excellent
