Session Topics

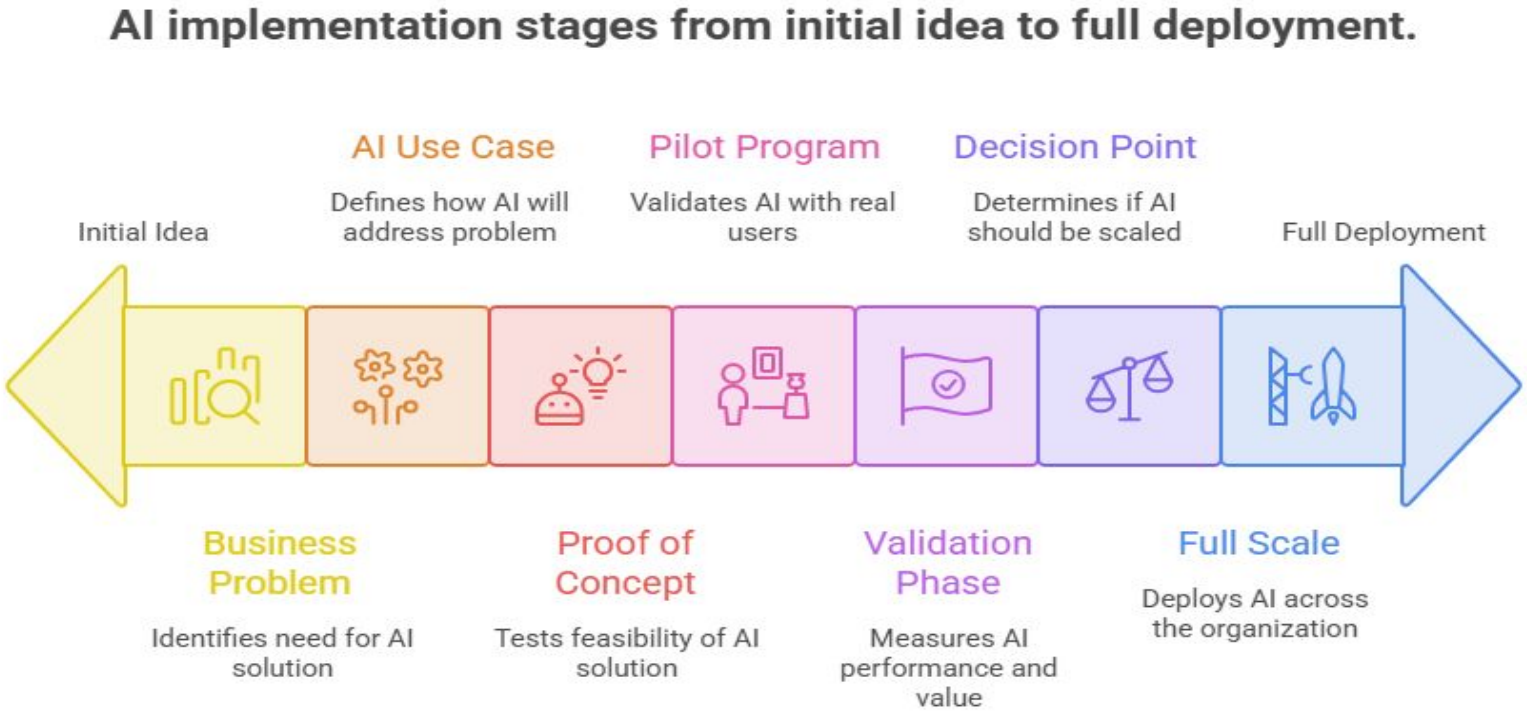

- ✔ Define a clear **PoC and pilot scope**
- ✔ Establish a **baseline** before implementing AI
- ✔ Select appropriate **users, data and test scenarios**
- ✔ Define **KPIs and acceptance criteria**
- ✔ Validate AI **accuracy, reliability and consistency**
- ✔ Test **edge cases and failure scenarios**
- ✔ Measure **business impact**
- ✔ Evaluate **user adoption and feedback**
- ✔ Make evidence-based **Go / Improve / Stop decisions**
- ✔ Workshop: AI Pilot & Validation Scorecard

From AI Idea to Pilot

SKILLOGIC

Datamites

PoC vs Pilot

PoC	Pilot
Tests whether the solution is technically possible	Tests whether the solution works in the real business environment
Limited data	Representative real-world data
Controlled environment	Real users/workflows
Focus on feasibility	Focus on value + usability + reliability
Short duration	Longer observation period
Technical success criteria	Business and operational KPIs

Example
PoC:
Can AI extract patient information from medical transcripts?
Pilot:
Can the AI reliably extract information from 1,000 real transcripts and reduce manual processing time by 40%?

Define Pilot Scope

A Good Pilot Should Clearly Define :

SKILLOGIC

Datamites

© 2025 Skillogic ® DataMites™. All Rights Reserved

Establish the Baseline

Why Baseline Matters

You cannot measure improvement unless you know the **starting point**.

Capture Current-State Performance

Metric	Current Baseline
Processing Time	30 min/case
Manual Effort	2 employees
Accuracy	85%
Cost	₹500/case
Error Rate	15%
Cases Processed	100/day

Compare
Before AI → During Pilot → After AI
Key Question
“What changed because of AI?”

SKILLOGIC

Select Pilot Users

Choose Users Carefully

Pilot users should represent the actual target population.

Selection Criteria

- **Different experience levels**
  Include new and experienced users.
- **Different business scenarios**
  Cover various real use cases.
- **High-frequency users**
  People who will use it regularly.
- **Representative departments**
  Include key business functions.
- **Willingness to provide feedback**
  Open and constructive users.
- **Mix of experienced and new users**
  Get a balanced perspective.

Avoid

- Selecting only AI-friendly users
- Testing only easy scenarios
- Using unrealistic data
- Choosing a sample that does not represent production users

Select Pilot Data

Use the right data to test in real-world conditions.

Data Should Be:

- Representative of real business conditions
- Sufficient in volume
- Diverse
- High-quality
- Legally and ethically usable
- Properly secured

Include Different Data Conditions

- Normal Cases
- Complex Cases
- Incomplete Data
- Noisy Data
- Unusual Cases

Example: AI Document-Processing Pilot

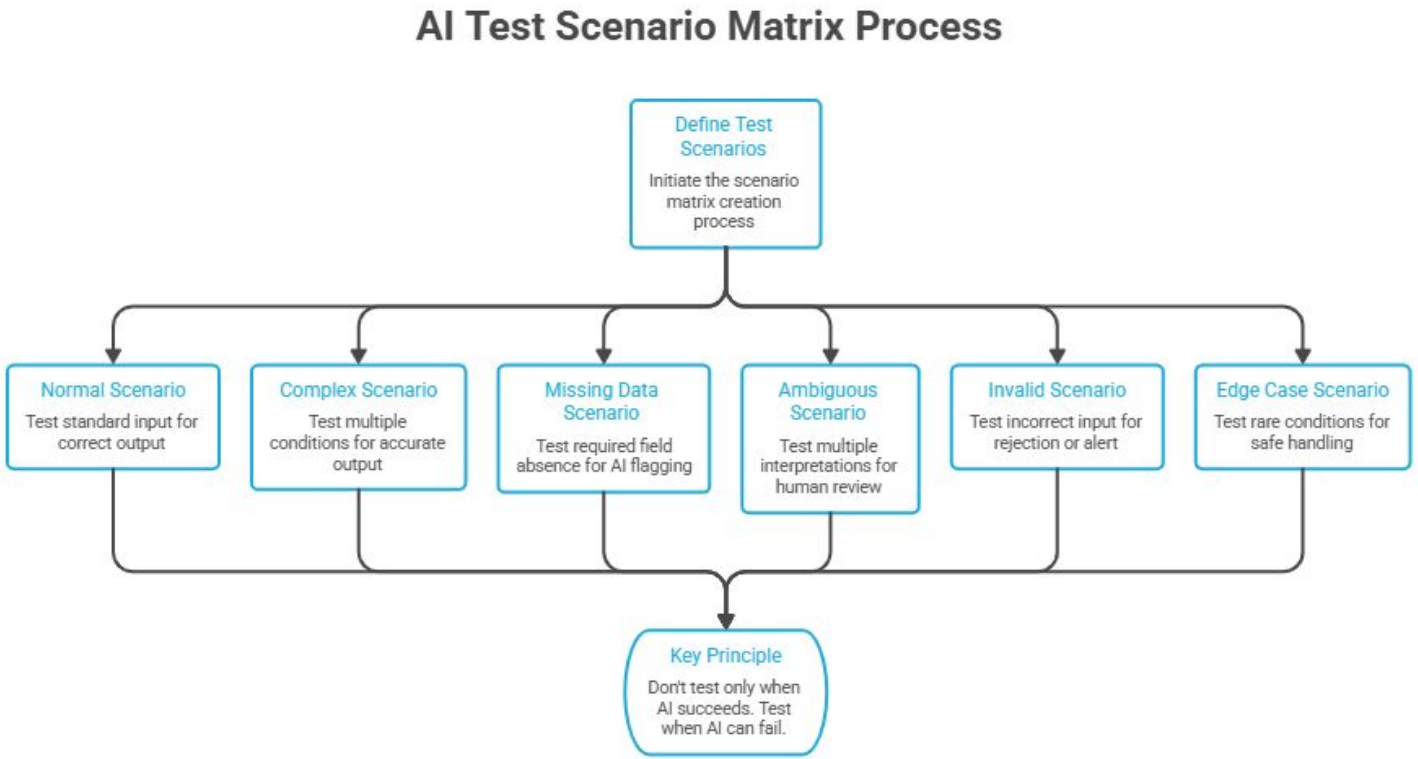

- Clear documents
- Poor-quality scans
- Different formats
- Missing information
- Handwritten content
- Long documents
- Duplicate documents

Validate AI Performance

Validation Approach

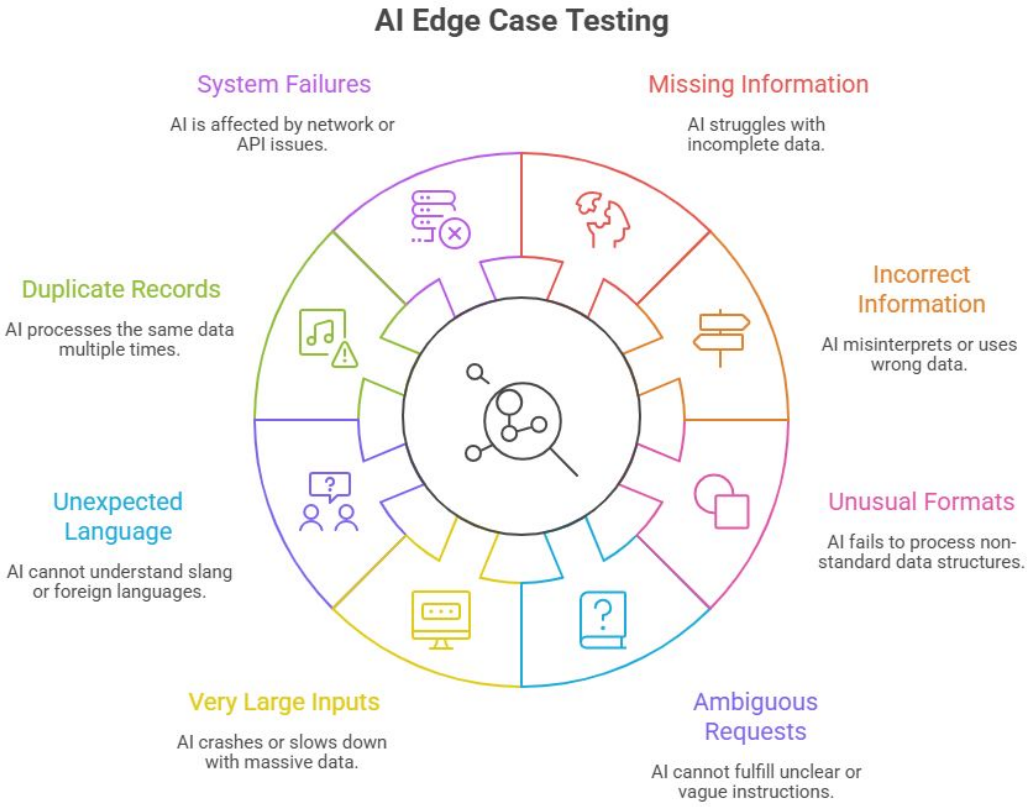

Input → AI Processing → Output → Compare with Expected Result → Measure Performance

SKILLOGIC

Human-in-the-Loop

When Should Humans Intervene?

AI should not make every decision independently.

Human Review Required When:

- Confidence is low
- Output affects customers
- Financial impact is high
- Regulatory requirements apply
- AI detects an unusual case
- Critical decisions are involved

Example Workflow

AI → Confidence Check →

🟢 High Confidence → **Auto Process**

🟡 Medium Confidence → **Human Review**

🔴 Low Confidence → **Escalate / Reject**

Measure Business Impact

Compare Before VS After

Business Measure	Before AI	Pilot	Improvement
Processing Time	30 min	18 min	40%
Manual Effort	100 hrs	60 hrs	40%
Error Rate	10%	4%	60%
Daily Capacity	100	160	60%
Cost/Case	₹500	₹350	30%

Business Impact Formula

Business Impact = Baseline Performance − Pilot Performance

Where applicable, translate the improvement into:

₹ Cost savings

Hours saved

Additional capacity

Revenue generated

Quality improvement

User Feedback & Adoption

Technical Success ≠ Business Success

An AI solution may be accurate but still fail if users don't trust or adopt it.

Collect Feedback On:

- ✔ Ease of use
- ✔ Trust
- ✔ Accuracy perception
- ✔ Time saved
- ✔ Workflow integration
- ✔ Output usefulness
- ✔ Pain points
- ✔ Training requirements

Adoption Metrics

- ✔ % Active Users
- ✔ Usage Frequency
- ✔ Task Completion Rate
- ✔ AI Acceptance Rate
- ✔ Override Rate
- ✔ User Satisfaction Score

Analyse Pilot Results

Create a Pilot Scorecard

Pilot Scorecard

Dimension	Target	Actual	Status
Accuracy	≥ 90%	**94%**	✓
Time Saving	≥ 30%	**35%**	✓
Error Rate	< 5%	**4%**	✓
Adoption	≥ 70%	**62%**	⚠
User Satisfaction	≥ 4/5	**4.2/5**	✓

Result Categories

Meets Target
On track and as expected

Partially Meets Target
Some improvement needed

Below Target
Does not meet expectations

Data-driven insights lead to better decisions.

Workshop: AI Pilot & Validation Scorecard

Workshop Objective

Participants will evaluate an AI pilot using a structured scorecard and make a **Go / Improve / Stop** recommendation.

Pilot Scorecard (Example)

Dimension	Target	Actual	Status
Accuracy	≥ 90%	**94%**	✓
Time Saving	≥ 30%	**35%**	✓
Error Rate	< 5%	**4%**	✓
Adoption	≥ 70%	**62%**	⚠
User Satisfaction	≥ 4/5	**4.2/5**	✓
