Session Topics

- ✔ Production readiness
- ✔ System and workflow integration
- ✔ Human-in-the-loop controls
- ✔ Privacy, security and compliance
- ✔ AI monitoring and ownership
- ✔ User adoption and change management
- ✔ Scaling across teams and business units
- ✔ Workshop — AI Governance & Scaling Playbook
- ✔ AI Governance & Scaling Canvas

From AI Pilot to Production

Why Productionization Matters

A successful pilot does not automatically mean the AI solution is ready for production.

Production AI must be:

- **Reliable** — performs consistently
- **Secure** — protects systems and data
- **Compliant** — follows organizational and regulatory requirements
- **Explainable** — decisions can be understood where required
- **Maintainable** — issues can be diagnosed and resolved
- **Scalable** — supports increasing users and workloads

Key Question

Can we safely operate this AI solution at business scale?

Production Readiness Checklist

Assess Before Go-Live

Technology

- ✔ Model performance validated
- ✔ Infrastructure ready
- ✔ APIs and integrations tested
- ✔ Load and performance testing completed

Data

- ✔ Data quality validated
- ✔ Data pipelines established
- ✔ Access controls implemented
- ✔ Data lineage documented

✔ Operations

- ✔ Support process defined
- ✔ Incident management established
- ✔ Backup and recovery planned
- ✔ Model update process defined

✔ Business

- ✔ Business owner identified
- ✔ Success KPIs defined
- ✔ User training completed
- ✔ Adoption plan prepared

Integrating AI Into Existing Workflows

AI Should Fit the Business Process

SKILLOGIC

Human-in-the-Loop

Keep Humans Involved Where Risk Is High

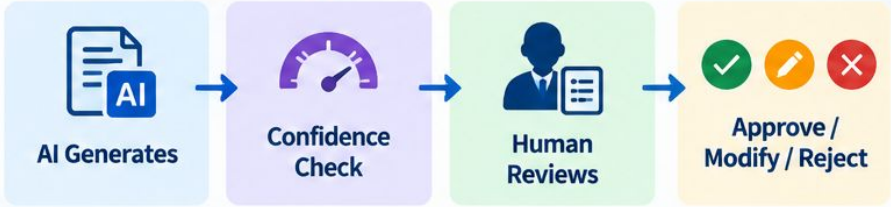

Human-in-the-loop means AI supports decision-making while humans retain appropriate oversight and control.

When Human Review Is Important

- High-impact decisions
- Financial transactions
- Customer-facing communication
- Legal or compliance-sensitive decisions
- Low-confidence AI outputs
- Unusual or exceptional cases

Example Workflow

Escalation Mechanisms

What Happens When AI Is Not Confident?

A production AI system needs a clearly defined fallback mechanism

Escalation Triggers

- ✔ Low confidence score
- ✔ Missing information
- ✔ Conflicting data
- ✔ Out-of-scope request
- ✔ Policy violation
- ✔ Abnormal model behaviour
- ✔ User dispute

AI Privacy & Data Protection

Protect Data Throughout the AI Lifecycle

AI systems may process sensitive business, customer, employee or operational information.

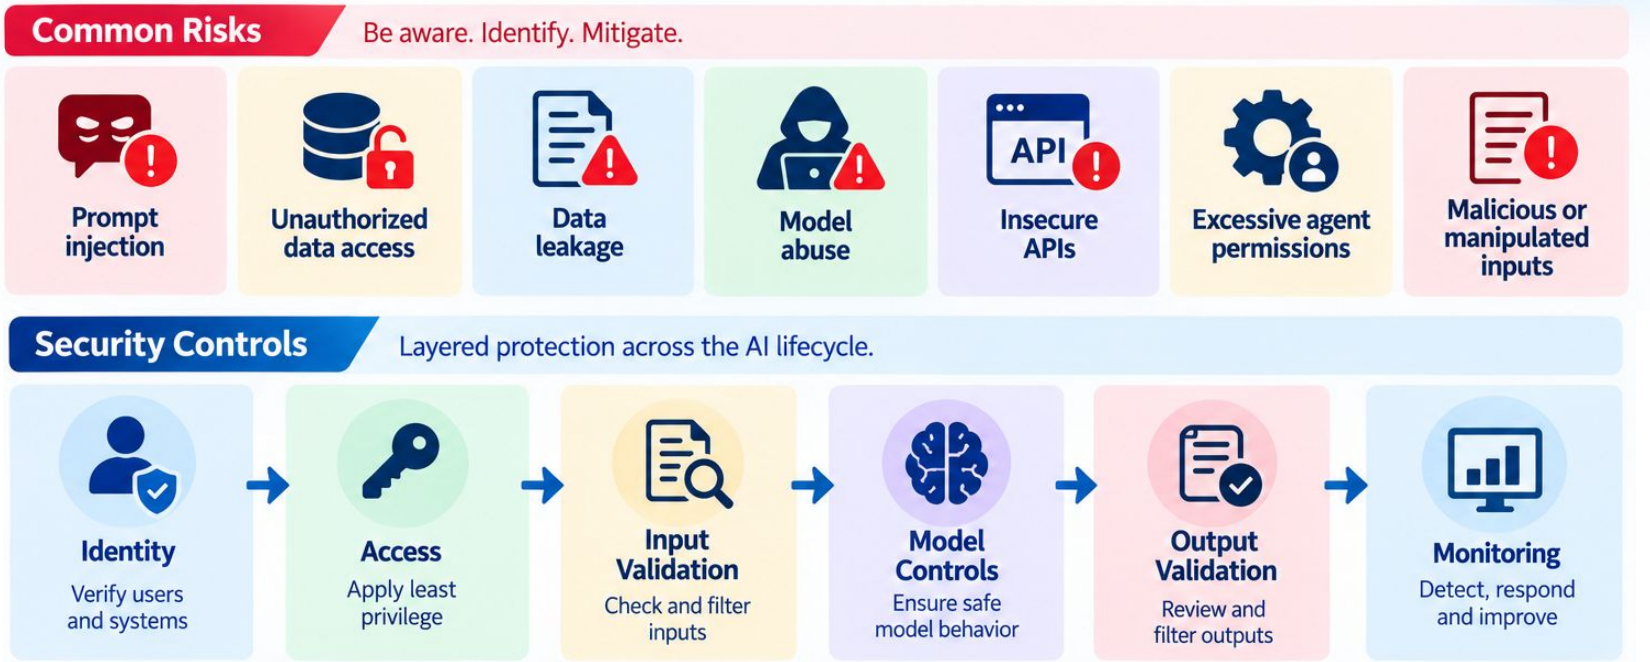

SKILLOGIC

Datamites

Bias, Fairness & Responsible AI

Areas to Assess

Identify and evaluate potential sources of bias.

- Training data bias
- Representation gaps
- Different performance across user groups
- Historical business bias
- Unequal error rates
- Unfair recommendations

Responsible AI Practices

Build fairness and accountability into the AI lifecycle.

- Test across relevant groups
- Monitor outcomes
- Document limitations
- Establish review processes
- Provide human oversight
- Define accountability

Compliance & Accountability

Define Who Is Responsible

AI governance requires clear accountability.

Principle

AI can make a recommendation, but accountability must remain with clearly identified people and teams.

AI Ownership & Support

Define the Operating Model

After deployment, someone must own the AI system.

SKILLOGIC

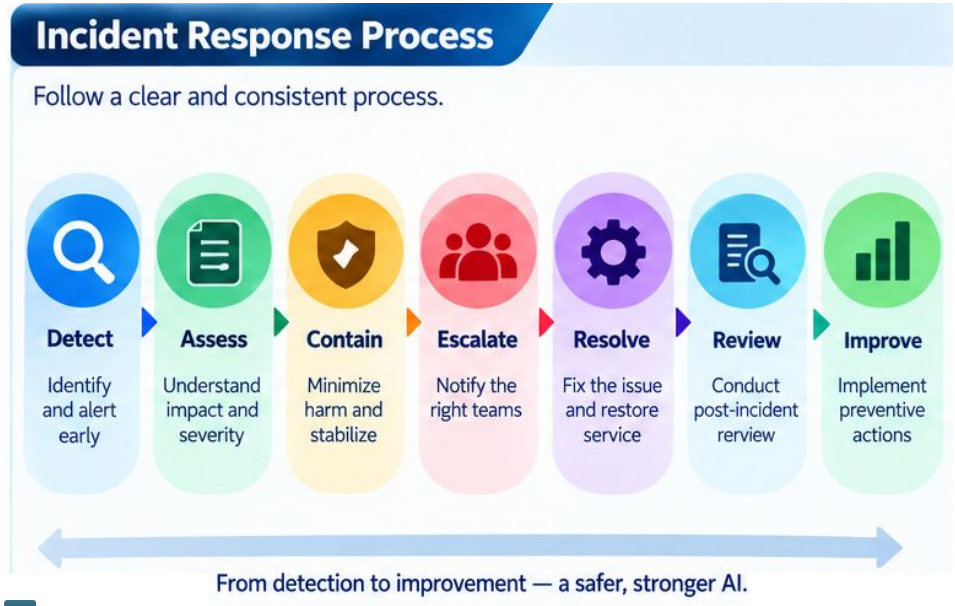

Datamites

AI Incident Management

Prepare for Failure

AI systems can fail even after successful deployment.

SKILLOGIC

User Adoption

Technology Adoption = Business Value

Even a technically successful AI solution can fail if users do not adopt it.

Adoption Drivers

- ✔ Simple user experience
- ✔ Clear business value
- ✔ User training
- ✔ Leadership sponsorship
- ✔ Trust in AI
- ✔ Accessible support
- ✔ Feedback mechanisms

✔ **Adoption Metrics**

- ✔ Active users
- ✔ Usage frequency
- ✔ Feature utilization
- ✔ Completion rate
- ✔ User satisfaction
- ✔ Retention
- ✔ Human override rate

Change Management

Prepare People for AI-Enabled Work

AI implementation can change roles, processes and responsibilities.

Change Management Framework

Awareness

→ Why are we introducing AI?

Understanding

→ How does it work?

Training

→ How should users use it?

Adoption

→ How does it fit into daily work?

Reinforcement

→ How do we sustain usage?

Scaling Across Teams

From One Successful Pilot to Enterprise Adoption

Scaling should be controlled rather than simply increasing the number of users.

Workshop — AI Governance & Scaling Playbook

Objective:
Participants create a practical governance and scaling plan for an AI solution that has successfully completed its pilot.

AI Governance & Scaling Canvas

1 AI Use Case

What are we deploying?

- Short description
- Business problem it solves
- Expected benefits

2 Business Owner

Who is accountable?

- Name / role
- Business unit
- Responsibilities

3 Users

Who will use it?

- Target user groups
- Departments / teams
- Number of users (initial)

4 Data

What data does it require?

- Data sources
- Type of data (internal / external)
- Data sensitivity
- Data ownership

5 Risks

What can go wrong?

- Privacy risks
- Security risks
- Bias / fairness risks
- Accuracy risks
- Compliance risks
- Operational risks
- User misuse

6 Controls

How will risks be managed?

- Access controls
- Data protection measures
- Security controls
- Bias mitigation
- Compliance requirements
- Escalation processes

7 Human Oversight

Where is human approval required?

- Decisions requiring human review
- Thresholds / rules
- Escalation scenarios
- Roles responsible

8 Monitoring

What will we measure?

- AI performance (accuracy, quality)
- Technical (availability, latency, errors)
- Business (productivity, cost, revenue)
- Adoption (usage, satisfaction)
- Risk indicators

9 Support

Who handles issues?

- L1 – User support
- L2 – Technical investigation
- L3 – AI/model/data specialists
- Support hours
- Incident management process

10 Scaling Plan

Where do we deploy next?

- Next teams / departments
- Additional use cases
- Geographies / markets
- Infrastructure requirements
- Timeline
- Success criteria
